

First AI-driven Tool

Help Organizations Select and Prioritize their Transformation Initiatives and Projects with the Highest Probability of Success

In the ever-evolving landscape of project management, the ability to select and prioritize transformation initiatives and projects with precision is paramount to organizational success. With AI Predictor, we've harnessed the power of advanced machine learning techniques to transform the way you approach project selection.

Based on extensive research and development, AI Predictor leverages over 90 meticulously crafted yes/no questions derived from the robust Project Canvas framework.

This innovative tool has been refined over two years, offering a prioritized list of projects ranked by their likelihood of success.

AI Predictor is already in use by a US-based food production company and an international business school, where it is helping train the next generation of project managers. As the tool continues to be fed with more project data, the machine learning algorithms become more effective at predicting success.

Proven Benefits for Your Organizations

- **Drastic Reduction in Failure Rates:** With failure rates of transformation initiatives and projects reaching up to 70%, AI Predictor is a critical tool in reversing this trend, saving organizations millions by steering them towards the most successful projects.
- **Data-Driven Decision Making:** By utilizing AI Predictor, organizations can make informed decisions based on data-driven insights, choosing the most impactful and valuable initiatives.
- **Improved Resource Allocation:** By focusing on the most promising projects, organizations can allocate resources more effectively, maximizing their return on investment

How AI Predictor Works

- **Input Data:** Users engage with the tool by answering a comprehensive set of 90+ yes/no questions for each transformation initiative or project, providing a rich dataset for analysis.
- **Processing and Analysis:** The data is then processed by the AI Predictor tool, which employs advanced machine learning algorithms to analyze each project thoroughly.
- **Output and Decision-Making:** The result is a prioritized list of initiatives, each with an individual assessment, enhancing leaders to reduce ambiguity, increase focus, and improve decision-making.

By adopting AI Predictor, organizations and Project Management Offices will see a radical transformation in the selection and prioritization of their strategic initiatives and projects.

Special Launch Offer of 50% Discount in the Analysis of Any Project and/or Portfolio.
